Equipment Preventative Maintenance (E.P.M)

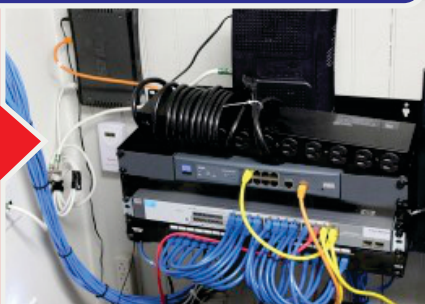

Preventive maintenance is a schedule of planned maintenance actions aimed at the prevention of breakdowns and failures. The primary goal of Equipment preventive maintenance is to prevent the failure of equipment caused by dust and other external particles before it actually occurs. It is designed to preserve and enhance equipment reliability. Preventive maintenance activities include equipment checks, partial or complete overhauls at specified periods, lubrication for moving parts like CPU & system fans and so on.

Help & Support

Online Data Backup Solution

- * Our Online Cloud Backup Solution is an innovative off-site backup service that provides fully encrypted, storage and recovery functionality. Fast cloud backup guarantees not only the highest levels of data protection but also ensures that you never have to worry about data loss.
- * Organizations of all sizes are witnessing an explosion in the volume of data they hold. Whether it is the result of the Internet, email, or increasingly heavy and media-rich application software, there is a massive growth in the volume of data all around.
- * Statistics on cloud data backup done by KPMG (2012) reported that data loss is pretty steady across all sectors.

DISASTER RECOVERY

- * Organizations are creating and storing growing quantities of data that must be preserved for longer periods, and that must be available in the event of a disaster or any problem that could make primary data unavailable. As a result, every organization should implement a business continuity/disaster recovery plan to ensure that critical business data is available continuously from any location.
- * With that in mind, our Fast Cloud backup service should be considered as part of your business continuity/disaster recovery plan because it guarantees the automatic and continuous saving of your critical data to our remote storage (data centre). Moreover, this data will be protected and availed on your demand.
